

TrustFix

The Neighborhood Trust Ledger

Making your neighbor's verified plumber your plumber

Reputation Evaporation

Every home service transaction starts from ZERO. Your neighbor hired a great plumber in 2022. You need one in 2026. That previous transaction is invisible. The trust evaporated.

For Customers

- Start search from scratch every time
- No accumulated trust signal
- Uncertain pricing, quality, reliability

For Providers

- Cannot monetize reputation
- Good work goes unnoticed
- Middlemen extract 30–40% for coordination

For the Market

- Lemons market: bad providers drive out good
- Premium options too expensive
- Mass market underserved

Insight: Trust isn't broken because reviews are fake. Trust is broken because reputation doesn't compound.

Two-Sided Personas

Customer

Anxious Ananya

Age 34 | Marketing Manager | Sobha Palm Court, Bangalore

Job to be done: When my pipe leaks at 7 PM, I need someone reliable within the hour who won't overcharge.

Pain Points

- Starts search from scratch every time
- Late arrivals, price surprises
- No recourse when things go wrong

Tech: iPhone 15 · UPI daily · Amazon Prime · Never used Urban Company (too expensive)

“Verified by 4 families in your building”

Provider

Reliable Ramesh

Age 31 | Electrician | 8 yrs experience | Self-taught

Job to be done: I want consistent work without paying 30% to middlemen. I want to buy a scooter.

Pain Points

- Irregular income, fake JustDial leads
- No way to build reputation beyond word-of-mouth
- Struggles with complex forms

Tech: Rs. 8,000 Android · WhatsApp for everything · YouTube to learn

“Tokens = visibility = more jobs = scooter dream”

Neighborhood Trust Ledger

- Verified transactions: every job creates an immutable, append-only entry on the ledger
- Reputation compounds: each Job Token links to the previous one in the same neighborhood
- Building-level trust: neighborhood-weighted, not city-wide — the closer, the stronger the signal
- Portable provider history: providers own their verified record, not the platform

Immutable

Neighborhood-scoped

12-month decay

Cross-validated

Job Token Structure

provider_id | customer_hash | building_id | gps_coords | upi_ref | timestamp | previous_hash

Ramesh_001 | Anon_7a3f | Sobha_PC | 12.97,77.65 | UPI_abc | 2026-07-01 | Hash_prev

Each token cryptographically references the prior job in that building — the chain is what makes trust portable and provable.

Why these weights: Based on 8 in-depth interviews: homeowners trusted same-building referrals 2–3x more than nearby ones. GPS proves location, UPI proves payment, photos prove work, and confirmation proves satisfaction.

Verification Signal Weights

GPS 40% · UPI 30%

Photo 20% · Confirm 10%

WhatsApp-First Booking

WhatsApp

Plumber urgent, leaking pipe kitchen

Finding plumbers... Reply 1, 2 or 3.

- 1. Ramesh — Rs.350
- 2. Suresh — Rs.400

ETA ~15 Minutes

Median time from WhatsApp message to a confirmed, priced provider match — no app download required.

< 2 Min

Total Booking Time

No app download required for first booking

Zero-Friction Onboarding

Onboarding — 3 Minutes Total

Bonus: Rs. 500 after 3 completed jobs

Namaste, Ramesh!

Why Providers Choose TrustFix

- Commission**
TrustFix: 10%
20–30% (UC)
- Payment**
TrustFix: Within 24h
Weekly (UC)
- Reputation**
TrustFix: Portable tokens
Platform-locked
- Working Capital**
TrustFix: Loans on tokens
Month 9
- Insurance**
TrustFix: Optional cover
Month 6

“UC rents you customers.
TrustFix helps you own your reputation.”

How Trust Compounds

The Compounding Loop

The graph compounds — each verified job increases the odds of the next.

Four-Layer Defense

Layer 1 — Economic

- Minimum job value Rs. 200 for token eligibility
- Dispute deposit Rs. 50 (refunded if valid)
- Community jury costs Rs. 200 (loser pays)
- Cost of attack > value of attack

Layer 2 — Technical

- Device fingerprinting prevents multi-accounting
- UPI linkage across accounts detects collusion
- Velocity limits: max 3 tokens/day per provider
- GPS anomaly detection flags suspicious patterns

Layer 3 — Social

- Repeat-customer tokens weighted 2x first-time
- Building Captain verifies new provider claims
- Neighborhood reputation is public — gaming hurts real relationships

Layer 4 — Audit

- 10% random manual review of all tokens
- Photo + GPS + UPI cross-check
- Provider-device binding at location
- Monthly pattern analysis for anomalies

< 2%

Estimated fraud rate with all four layers active

15–25%

Industry average fraud/manipulation rate (star ratings)

RICE Framework

RICE Score = (Reach × Impact × Confidence) / Effort

Feature	Reach	Impact	Conf.	Effort	RICE	Decision
WhatsApp Booking Channel	100%	High	High	Low	400	MVP
3-Min Provider Onboarding	100%	High	High	Low	350	MVP
Neighborhood Txn Display	80%	High	Med	Low	320	MVP
Market Price Anchor	100%	Med	High	Low	300	MVP
Basic Scheduling	100%	Med	High	Low	280	MVP
Verified Job Tokens	100%	V.High	Med	Med	267	MVP
Provider PWA Dashboard	100%	High	High	Med	200	MVP
Escrow Payment	60%	Med	Med	High	120	Phase 2
Building Captain Program	20%	High	Low	Med	107	Phase 2
Dispute Resolution Engine	10%	Med	Low	High	40	Phase 2

Removed from MVP: AI pricing, background checks, provider training, subscription plans, native mobile apps, multi-city expansion

Apartment-First Density

Density Gate: If jobs/building/week < 5 → PAUSE expansion. Fix pricing, add providers, increase marketing before expanding further.

The Path to Profitability

Metric	Month 6	Month 12	Path to Improvement
Avg Order Value	Rs. 600	Rs. 800	+Electrical + AC categories
Take Rate	10%	10%	Sustainable vs Urban Company
Gross Revenue / Job	Rs. 60	Rs. 80	Higher AOV
Payment Gateway (3%)	Rs. 18	Rs. 24	Razorpay volume discounts
SMS / WhatsApp API	Rs. 5	Rs. 5	Volume discounts
Verification Cost	Rs. 15	Rs. 12	Automation + scale
CONTRIBUTION MARGIN	Rs. 22	Rs. 39	Cross-category + efficiency
Blended CAC	Rs. 350	Rs. 100	Referral loops mature
Payback Period	16 jobs	3 jobs	Better margins + lower CAC
Monthly Fixed Costs	Rs. 8L	Rs. 12L	Team expansion
Monthly Jobs	5,000	15,000	Density + categories
MONTHLY P&L	-Rs. 7L	+Rs. 6L	Cross-category LTV essential

Path to Profitability

Month 6: Prove unit economics (Rs. 22 margin)

Month 9: Cross-category LTV > CAC

Month 12: Scale to Rs. 6L monthly profit

MVP is intentionally loss-making. Month 6 proves unit economics. Month 12 scales via cross-category expansion.

Verified Neighborhood Jobs

North Star Metric

Verified Neighborhood Jobs (VNJ) — *completed jobs with all 3 verification signals in a neighborhood with >5 prior verified jobs.*

Where TrustFix Wins

	Urban Company	JustDial	TrustFix MVP
Trust Model	Internal verification + insurance	None	Neighborhood-verified ledger
Pricing	Fixed packages (premium)	Variable / haggling	Market anchor + provider quote
Discovery	App-only, city-wide	Phone/website, chaotic	WhatsApp-first, neighborhood-weighted
Provider Economics	20–30% commission, trained pros	Pay-per-lead (fake leads)	10% commission, reputation compounds
Target Segment	Premium urban	Price-sensitive	Trust-seeking mass market

“Urban Company rents you customers. TrustFix helps you own your reputation.”

Our Moat: Two years of neighborhood transaction data + provider habit + building partnerships. Copying the feature takes 6 months. Copying the data takes 2 years.

Building for Failure Modes

Risk	Prob.	Detection	Mitigation
Provider No-Show	Med	GPS alert + time threshold	Blacklist after 2 incidents. Rs.100 customer credit.
Customer Fraud (fake disputes)	Med	Pattern: 3+ disputes / month	UPI linkage + device fingerprinting. Rs.50 deposit.
Off-Platform Collusion	High	UPI pattern analysis	Tokens = visibility. Off-platform = invisible.
Fake Job Tokens	Low	GPS anomaly + photo audit	Min Rs.200 job value. 10% random audit. Velocity limits.
Low Marketplace Liquidity	Med	Jobs/provider/week < 3	Pause expansion. Emergency recruitment.
WhatsApp API Risk	Med	API pricing changes	Parallel SMS channel (Twilio). PWA fallback.

Contingency Flow

From Insight to Scale

One insight. One metric. One city. One category.

Build the ledger. Trust compounds.
