

Building TrustFix: A Trusted Home Services Marketplace

Context

Existing Market

Finding trustworthy home service professionals such as plumbers, electricians, carpenters, appliance repair technicians, cleaners, painters, and AC mechanics remains a frustrating experience.

Customers typically rely on local recommendations, social media groups, or online listings, often facing:

- Unverified professionals
- Unpredictable pricing
- Delayed arrivals
- Poor service quality
- Lack of accountability
- Difficulty comparing providers

At the same time, service professionals struggle to find consistent work, manage bookings, build credibility, and grow their businesses.

Digital marketplaces have the potential to simplify service discovery, improve transparency, and create trust for both customers and service providers. However, building a marketplace that effectively balances the needs of both sides remains a significant challenge.

The Problem

The platform aims to solve the trust and coordination challenges in the home services market.

Customers often hesitate to book services due to uncertainty around provider reliability, pricing, and service quality, while professionals struggle to establish credibility and secure repeat business.

These issues lead to:

- Low customer confidence in booking services
 - Inconsistent work opportunities for professionals
 - Poor customer retention
 - Limited marketplace growth and trust
-

Key Constraints

Participants should assume the following constraints:

- The platform is a new product being built from scratch.
 - Engineering resources are limited, requiring careful MVP prioritization.
 - Service professionals have varying levels of digital literacy.
 - The solution should be scalable across multiple service categories and cities.
-

Your Role

You are the Product Manager responsible for taking TrustFix from concept to launch.

You should:

- Design a product that creates value for both customers and service providers.
- Prioritize features for an MVP.
- Define measurable success metrics.
- Develop a practical Go-To-Market strategy.

You should **not**:

- Assume unlimited engineering resources.
 - Include every possible feature in the MVP without justification.
-

Deliverables

Participants are required to submit **two deliverables**.

1. Presentation Deck (10–15 Slides)

The presentation should cover:

- **Problem Identification**
 - Clearly define the primary customer and service provider problems.
 - Include **detailed User Personas** for both customers and service professionals.
- **Product Recommendation**
 - Present your proposed solution, including key features and the overall product experience.
- **MVP Prioritization**
 - Identify the features to include in the MVP and justify your prioritization.
- **Go-To-Market Strategy**
 - Outline how you would launch and grow the platform.
- **Success Metrics**
 - Define how product success will be measured, including at least one North Star Metric and supporting metrics.

- **Risks & Trade-offs**

- Highlight key risks associated with your proposal and explain how you would mitigate them.

2. Wireframes

Submit wireframes demonstrating your proposed solution in **PDF, document, or shareable design link (e.g., Figma View Link)**.

Your submission should clearly showcase:

- Key user flows
- Primary screens
- Overall user experience
- Important interactions supporting your proposed solution

Evaluation Criteria

Evaluation Aspect	Weightage
Problem Identification & User Personas	25%
Solution Approach & Product Thinking	25%
Wireframes & User Experience	20%
MVP Prioritization & Go-To-Market Strategy	15%
Success Metrics	10%
Deck Hygiene, Storytelling & Overall Presentation	5%

Total: 100%
